

Meridian FinTech Solutions – Cybersecurity Risk Management Plan

Overview

This project focused on developing a cybersecurity risk management strategy for a cloud-based financial technology organization. The goal was to identify critical security risks and design mitigation strategies that improve operational resilience.

Objective

To assess cybersecurity threats affecting fintech operations and establish a structured framework for risk management, compliance, and business continuity.

Scope

- Cloud infrastructure security
- Identity and access management
- Data protection
- Regulatory compliance
- Business continuity planning
- Third-party risks

Frameworks Used

- NIST SP 800-30
- ISO/IEC 27001
- PCI DSS
- GDPR
- AML Compliance Standards

Key Activities

- Conducted cybersecurity risk assessments
- Identified high-priority threats and vulnerabilities
- Developed mitigation and response strategies
- Created Business Impact Analysis (BIA)
- Developed Business Continuity Plans (BCP)

My Contributions

- Performed risk identification and assessment
- Evaluated security controls
- Developed mitigation recommendations
- Participated in continuity and recovery planning

Outcome

Produced a comprehensive risk management framework that improves security posture, compliance readiness, and organizational resilience.
