

Smart Vault – Secure Smart Postbox System

Overview

Smart Vault is a secure package delivery solution designed to reduce package theft and improve delivery success rates through controlled access mechanisms.

Problem

Homeowners frequently experience missed deliveries and package theft when parcels are left unattended.

Solution

The system provides a secure delivery vault that allows couriers to deposit packages using temporary access credentials while keeping packages protected.

Key Features

- PIN-based access control
- One-time QR code access
- Delivery tracking
- Real-time notifications
- User and courier communication
- Secure package storage

Technologies & Concepts

- Mobile Application Design
- Product Innovation
- UX/UI Design
- Business Analysis

My Contributions

- Developed the product concept
- Designed user workflows
- Defined MVP requirements
- Conducted market research
- Performed user and competitor analysis

Outcome

Created an innovative package delivery solution that improves security, convenience, and delivery reliability.
