

Telemedicine Platform

Overview

This project focused on planning and managing the development of a telemedicine platform that enables remote healthcare services and virtual patient-doctor consultations.

Objective

To improve healthcare accessibility by providing a platform that supports remote medical consultations and appointment management.

Project Scope

- Virtual consultations
- Appointment scheduling
- Patient management
- Healthcare communication
- Digital healthcare services

Key Activities

- Project planning
- Stakeholder analysis
- Risk management
- Cost estimation
- Scheduling and resource planning
- Communication planning

Deliverables

- Project Charter
- Work Breakdown Structure (WBS)
- Gantt Chart
- Risk Management Plan
- Cost Estimates
- Communication Plan

My Contributions

- Participated in project planning
- Conducted stakeholder analysis
- Developed risk management strategies
- Assisted in project scheduling and documentation

Outcome

Produced a complete project management plan that supports the successful implementation of a telemedicine solution.
