

Tesla IT Audit Plan & Audit Program

Overview

This project focused on developing a risk-based IT audit plan for Tesla's technology environment. The audit program was designed to evaluate security controls, compliance requirements, operational risks, and the effectiveness of critical business systems.

Objective

To identify high-risk technology areas and develop an audit strategy that improves cybersecurity, compliance, and operational resilience.

Audit Scope

- Vehicle software systems
- Cloud infrastructure
- Artificial Intelligence platforms
- Identity and Access Management (IAM)
- Manufacturing systems
- Data privacy controls

Frameworks Used

- COBIT 2019
- NIST Cybersecurity Framework
- ISO/IEC 27001

Key Activities

- Performed risk assessments
- Prioritized audit areas
- Evaluated security and compliance controls
- Developed audit procedures and testing plans
- Created annual audit schedules

My Contributions

- Conducted risk analysis and control evaluation
- Identified critical audit areas
- Developed audit procedures
- Participated in audit planning and reporting

Outcome

Produced a comprehensive IT audit plan that supports risk management, regulatory compliance, and organizational governance.
