

Travel Agency Database Management System

Overview

This project involved designing and implementing a relational database system for managing travel agency operations, including customers, bookings, travel packages, flights, hotels, and car rentals.

Problem

Travel agencies manage large amounts of interconnected information that require efficient storage, organization, and retrieval.

Solution

A normalized relational database was designed to support business operations while maintaining data integrity and reducing redundancy.

Key Features

- Customer management
- Booking management
- Travel package management
- Flight reservations
- Hotel reservations
- Car rental management
- Relational database design

Technologies Used

- SQL
- Database Design
- ER Modeling
- EER Modeling
- Database Normalization

My Contributions

- Designed ER and EER diagrams
- Applied normalization up to 3NF
- Developed database schemas
- Implemented relationships and constraints
- Created sample datasets for testing

Outcome

Developed a structured and scalable database solution that supports efficient travel agency operations and data management.
