

Campus Hub – Course Notes Module

Overview

Campus Hub is a web-based student platform designed to centralize useful university services in a single application. As part of a team project, I developed the Course Notes module, enabling students to upload, manage, and share academic notes with their peers.

Problem

Students often rely on scattered platforms to exchange study materials, making it difficult to find organized and course-specific notes.

Solution

I developed a Course Notes module that provides a centralized space for students to upload, search, filter, and manage course notes while encouraging collaboration through comments and feedback.

Key Features

- Upload course notes in PDF format
- Search notes by course name, title, or description
- Filter notes by department
- Sort notes alphabetically
- View detailed note information
- Add and manage comments
- Edit and delete notes
- Pagination for easier navigation
- Responsive user interface

Technologies Used

- HTML5
- CSS3
- JavaScript
- JSON
- Bulma CSS

My Contributions

- Developed the complete Course Notes module.
- Implemented searching, filtering, sorting, and pagination functionalities.
- Built the note details page with a commenting system.
- Developed CRUD operations for managing course notes.
- Integrated dynamic data retrieval and responsive user interface components.

Challenges

One of the main challenges was implementing dynamic filtering, pagination, and note management while maintaining a responsive and user-friendly interface.

Lessons Learned

This project improved my skills in JavaScript, DOM manipulation, JSON data handling, responsive web design, and building interactive client-side web applications.
